### Patient Engagement

## **Text Patients Directly & Securely, Including PHI**

- Secure, encrypted patient conversations in easy-to-use text format
- Clinician-initiated sessions keep providers in control
- Easy for patients no portals, apps, or login credentials needed

### A Single App for Patient and Provider Conversations

TigerConnect Patient Engagement is a powerful yet easy way for healthcare professionals to communicate with patients using secure text. Built into the TigerConnect app, Patient Engagement lets you converse with patients 1-on-1 or loop in a larger care team.

For patients, there are no apps to download, no cumbersome portals, and no phone tag.

### Pre- and Post-Surgery Outreach

Address patient concerns hours and days after a hospital stay to head off potentially serious issues. For pre-visits, attach instructions and answer questions.

### Maximize Appointments

Send text reminders to cut down on cancellations and no-shows, and quickly fill unexpected openings.

### Update Family Members in Real Time

Text anxious parents during a child's surgery or message an aging patient's family after a fall.

### The Problem with Patient Portals

EHR patient portals were never designed for communication. In fact, less than 20%<sup>1</sup> of patients ever log in while Pew Research says 97% of smartphone owners text. Unique URLs, passwords, and a complex interface make it confusing for patients to navigate and reach providers. TigerConnect solves this with a seamless, elegant user experience for both patients and care teams.

your appointment?
